

BMG Northern Networks Ltd.

Employment Opportunity Pipeline Construction Inspector

The Pipeline Construction Inspector is the individual who is accountable for the safe, reliable, timely and cost efficient execution of the construction component of their portion of the project. Inspectors will be representing major oil and gas industry clients on construction, maintenance, and/or abandonment projects. Inspectors will be used to ensure quality and integrity of the project and to document work activities; i.e. take measurements and photographs, as needed. In addition, Inspectors will be required to provide the following services/oversight and certifications to the client:

Duties/Responsibilities:

- Monitor contractor quality, safety procedures and productivity
- Inspect materials and quality of work of pipeline construction for conformance to specifications
- Observe preparation of right-of-way for conformance to contract agreement
- Verify depth and alignment of trenches
- Examine bottom of trench for rocks or other hard objects that might damage pipe coatings
- Examine surface and x-ray films of welded joints to detect external and internal welding defects
- Observe coating and wrapping of pipe or pipe joints for conformance to specifications and verify accuracy of coating by observing or conducting electrical tests for holidays (inadequately coated areas on pipe)
- Advise supervisor regarding corrections to be made
- Monitor contractor activities to ensure regulatory agency participation in ongoing construction activities as Acts or Regulations may dictate
- Document and sign-off on all compliance requirements
- Preparation of daily field reports and related documentation
- Participate in contractor progress review meetings
- Monitor and report on contractor adherence to schedule
- Monitor contractor'(s) compliance with respect to quality of work and adherence to applicable codes, standards, design documents and schedules

Qualifications:

- Knowledge and familiarity of civil construction
- Knowledgeable with codes applicable to the work
- Ability to familiarize and remain responsible for the application of the processes dictated by the quality and safety manuals
- Prefer a minimum of 5 years experience working on pipeline construction projects
- Ability to work in a team environment
- Possess a valid Driver's License
- Highly recommend proficiencies in Microsoft Word Level 1 and Excel Level 1

Safety Certificates Required:

- WHMIS
- CSTS
- First Aid/CPR
- H2S Alive
- Ground Disturbance Level 2
- ATV Training
- TDG
